FibroScan® is a medical device intended as an aid for the management of patients with liver disease. Measurements should be performed by a certified operator. The values obtained must be interpreted by a physician experienced in dealing with liver disease, taking into account the complete medical records of the patient, the number of valid measurements and their dispersion. Probes must be calibrated according to the manufacturer's recommendations.

Whole Abdomen Ultrasound

Indication :
HBV Cured and NASH

TECHNIQUE: A sonogram of the abdomen and pelvis was performed assessing gray scale appearance using low frequency transducer and color duplex flow.

RESULT:

- **Liver:** Normal in size. Regular contours with homogenous increased echogenicity. No focal lesion is suspect.
- **Portal veins:** Normal caliber. Hepatopetal flow. **Hepatic veins:** are patent.
- **Bile ducts:** Normal intrahepatic ducts. Common bile ducts: not dilated.
- **Gallbladder:** distended (APD=48mm). Normal wall thickness. Contain no stone.
- **Pancreas:** The visualized part appears normal. No pancreatic ductal dilatation is visualized.
- **Spleen:** Normal size and echogenicity.
- **Right kidney:** Normal size and echogenicity. No hydronephrosis, renal mass or calculi are visualized.
- **Left kidney:** Normal size and echogenicity. No hydronephrosis, renal mass or calculi are visualized.
- **Bladder:** Partially distended. No wall thickening. Contain anechoic fluid. No calculus.
- **Uterus:** atrophic
- **Adnexas:** Not seen.
- **Douglas:** no free fluid.

CONCLUSION:

Liver is normal in sized and in morphology with moderated fatty liver, no suspected focal lesion seen.
